Press release

Two that fit together: Scandi Byg and LTG Lofts to go Modular construction specialist now building sustainable codos in serial production

Hamburg / Tallinn / Løgstør

The Hamburg/Tallinn based tiny-house company LTG Lofts to go has found the ideal partner for the production of its codos in the modular construction specialist and market leader from Denmark, Scandi Byg. Based in Løgstør near Aalborg, the unique oval-shaped modular houses are being built in a sustainable way.

LTG Lofts to go from Hamburg/Tallinn and Scandi Byg are now pursuing the same goal, to produce large quantities of complete houses inclusive of the bathroom and kitchen and ready for delivery in one place in a sustainable manner. The 24 to 72 square meter codos are made of Douglas fir wood. A leader in sustainable construction in Denmark, Scandi Byg sources the wood exclusively from sustainable suppliers. The CEO of Scandi Byg Christian Haken sees in the cooperation with codo an opportunity to set new standards for the serial construction of modular houses for the benefit of the customer and nature: " We are very happy that we have entered into a framework agreement with LTG Lofts to go. It is a very exciting project that really speaks to the future of sustainable construction/buildings and lifestyle and while utilising our own modular constructions. At the same time, it is a very different product than our own modules so we are looking forward to dive into these mobile living-solutions and get yet another exciting product on the shelf."

LTG Lofts to go CEO Mark Dare Schmiedel is pleased that codo serial production is picking up speed just in time for the brand launch in April: "We can now deliver a large number of codos in a short period of time completely independent of the weather, and at the same time see our high standards of quality and sustainability fully met." This is also important for customers who want to use the codo as their own home, second home, holiday residence, extra room, office or as an exhibition space. LTG Lofts to go aims to deliver over 1000 codos by 2023, including for the planned "codo universes" with more than 100 codos in northern Germany, Scandinavia and Portugal.

The codos from LTG Lofts to go are available in sun, earth (wood) and moon (white). They can grow by connecting several modules together and they are mobile as they can be moved by truck and installed by crane. They are available in different finishes from "pure" to "fabulous" so that the future owner can also include their individual preferences.

Scandi Byg is a subsidiary in one of Denmark's largest entrepreneurial groups MT Højgaard Holding and is the largest supplier of industrially manufactured modules for homes, offices, institutions, schools and research and laboratory facilities for professional private and public customers. Scandi Byg is also a leader in sustainable buildings.
